Meet Richard G. Pestell, MD, PhD
Director, Kimmel Cancer Center at Jefferson

As described in detail in a special, November issue of JeffNEWS, Richard G. Pestell, MD, PhD, an internationally renowned expert in oncology and endocrinology, has been named Director of the Kimmel Cancer Center at Jefferson. The announcement was made by Thomas Jefferson University President Robert L. Barchi, MD, PhD.

With this appointment, the cancer programs at Jefferson are being restructured and the role of the Cancer Center Director has been expanded. Dr. Pestell will also be Professor and Chair of the newly created Department of Cancer Biology. Associate Dean for Cancer Programs at Jefferson Medical College (JMC) and Vice President for Oncology Services at Thomas Jefferson University Hospital.

He comes to Jefferson from the Lombardi Comprehensive Cancer Center at Georgetown University in Washington, DC, where he was Director since September 2002. He was also the Francis L. and Charlotte Gragnani Chair of the Department of Oncology at Georgetown University School of Medicine and Associate Vice President for Georgetown University Medical Center. An active scientist, Dr. Pestell is bringing a cadre of researchers from Georgetown.

A specialist in hormone-related cancers, Dr. Pestell’s work is directed toward the eventual discovery of novel therapies for diseases such as breast and prostate cancer.

In addition to being an accomplished scientist, Dr. Pestell is a man for all seasons: a poet, a jogger and marathon runner, scuba diver and whitewater rafter.

On December 1, Dr. Pestell is set to assume his responsibilities at Jefferson. His office is located at 1050 Bluemle Life Sciences Building, and he may be reached at 215-503-5649.

Hoisting into Place the Pedestrian Bridge Linking Gibbon Building with New Garage

When the garage opens in April 2006, the bridge will allow patients and families direct access to Gibbon.

Jefferson Radiology Participates in Clinical Trial Showing Benefits of Digital Mammography

Preliminary results from a large clinical Digital Mammographic Screening (DMIST) trial, in which Jefferson was a key participant, show that digital mammography was significantly better than film-screen mammography in screening women who fit any of these three categories: a) under age 50; b) of any age with heterogeneously or extremely dense breasts; c) pre- or peri-menopausal women of any age.

The DMIST trial sponsored by the National Cancer Institute (NCI), part of the National Institutes of Health, was conducted by a network of researchers led by the American College of Radiology Imaging Network (ACRIN). The results were reported in September in a special online publication of the New England Journal of Medicine and at a meeting of ACRIN in Pentagon City, VA.

Vijay Rao, MD, Chair, Radiology, Jefferson Medical College, says, “We actively participated in this trial and received recognition for a high patient accrual rate and data quality.”

What is Digital Mammography?

Digital mammography represents an exciting new frontier in the evaluation of breast cancer.

Thomas J. Nasca, MD, to Receive 2006 APDIM Dema C. Daley Founders Award

The Association of Program Directors in Internal Medicine (APDIM) has announced that Thomas J. Nasca, MD, Dean of Jefferson Medical College, will receive the 2006 APDIM Dema C. Daley Founders Award. Dr. Nasca served on the APDIM Council from 1992 to 2001, and as the Association’s President in 2000.

The APDIM Dema C. Daley Founders Award honors a member of the internal medicine community recognized nationally as an educator, innovator and leader. Past recipients’ contributions have influenced areas of undergraduate and graduate medical education and the development of training programs in internal medicine, APDIM, or other organizations that are educationally focused.

In 2003, APDIM dedicated the award to Dema C. Daley who served as APDIM Executive Director from 1987 to 2000 and as Executive Vice President until her death in 2003.

Just in Time for the Holidays – Women’s Board Jewelry Sale December 1 and 2

The Martha Jefferson Department of the Women’s Board of Thomas Jefferson University Hospital is sponsoring a Jewelry Sale December 1 and 2 from 8 a.m. to 4 p.m. in the West Atrium of the Gibbon Building. Proceeds benefit patient care. Payroll deductions for purchases is available.

Come to University Choir Concert December 9

The Thomas Jefferson University Choir’s winter concert will feature a performance of Haydn’s Schöpfung Messe with other music of the season. A full orchestra will accompany the choir which consists of students, nurses, physicians, employees, spouses and other members of the Jefferson family. The free concert Friday, December 9, at 8 p.m. at The Church of St. Luke and the Epiphany, 330 South 13th St., Philadelphia, marks the choir’s 36th season. Call 215-790-5195 or 5194.

Earned Over 30 Years, Recognition Is Easy to Swallow

It’s an example of what happens when you stay focused on what you like, what you know about and what you’re good at. As part of a multi-disciplinary team, Dr. Judy Schultz has worked with swallowing and swallowing disorders (dysphagia) for most of her 36-year career in speech pathology. The Specialty Board on Swallowing and Swallowing Disorders of the American Speech-Language-Hearing Association (ASHA) awarded Ms. Schultz with Board Recognition for Swallowing and Swallowing Disorders (BRK-S). Swallowing disorders are often present in patients with neurological conditions such as stroke, Parkinson’s disease, ALS, dementia or head trauma, as well as patients recovering from head and neck surgery.

“You simply can’t overestimate the impact of even a partial loss of swallowing function,” says Ms. Schultz. “It is particularly difficult socially. Imagine the isolation of not being able to sit and eat with your family, go to a restaurant or just step out to enjoy a cup of coffee.” Ms. Schultz serves as a Level II Advanced Clinician in Jefferson’s Department of Rehabilitation Medicine, where she was head of speech pathology for 25 years. Her role as an instructor in dysphagia, and her continual advancement of her knowledge over the decades, has put her on the forefront of diagnosis and therapies for this often-devastating problem. With this recognition of her expertise, Ms. Schultz plans to carry on her valuable work with dysphagic patients at Jefferson.

Virologist Hilary Koprowski, MD Wins Prestigious Polish National Award

Hilary Koprowski, MD, Professor of Microbiology and Immunology and Director of the Biotechnology Foundation Laboratories and the Center for Neurovirology at Jefferson Medical College, has won the 2005 Andrzej Drawicz Prize, given to persons who contribute in an outstanding way to the cultivation of the Polish cultural heritage in the world, in the spirit of tolerance and respect for differences.

Weather Emergencies . . . Know Your Status, Call 1-800-858-8806

The Philadelphia area has enjoyed relatively mild weather during the fall season, with balmy temperatures prevailing for much of November. The winter months ahead will bring a dramatic change, and this time of year gives rise to speculation about how low the temperatures may go, and how much snow will fall. “We must be prepared for whatever may develop,” says Brian P. Bowie, Associate Vice President for Human Resources. He adds, “Thankfully, the last two years have not presented the challenges of the blizzard of February 17, 2003, but that storm remains a vivid reminder of what winter can bring to the Delaware Valley.”

Some important points from Jefferson’s weather emergency policy:

• Department Heads will advise all faculty and employees of their status as either “designated” or “nondesignated” personnel.
• Designated personnel are required to report in the event of a declared weather emergency. Absences of designated personnel during a weather emergency are without pay, but are not charged to an employee’s lost-time rate under the attendance policy.
• Nondesignated personnel, while expected to make every effort to report as scheduled, may use a vacation or personal day if transportation or other weather-related problems result in lost time during a weather emergency.
• A toll-free Jefferson hotline, 1-800-858-8806, will provide complete weather-emergency information. Similar information will be available through the Jefferson Pulse campus portal.
• Students can also obtain weather-emergency information from the hotline. The dean of each academic division will decide about class cancellation. Scheduled classes for MD and PhD students will take place regardless of weather conditions.

Anytime with questions about the policy may contact the Office of Employee Relations at 215-503-7758.

Jefferson African American Student Society Welcomes New Jefferson Students

The Jefferson African American Student Society (JAASS) held its Annual Welcoming Luncheon at Eakins Lounge for newly enrolled African-American and other minority students to Thomas Jefferson University. About 25 students from all three colleges attended.

Serving students from all three colleges, JAASS provides a network and support system for African-American and other students, and serves as a forum through which ideas – academic or social – may be exchanged between members and the community at large. JAASS also promotes a spirit of volunteerism among members for the benefit of Jefferson and the surrounding communities. It is not necessary for JAASS members to be of African descent; membership is open to anyone who has the desire to promote cultural awareness and respect for cultural diversity.

Will Borde-Perry, MD, JMC ‘04, gave the keynote address on “Principles for Success,” summarizing three SVS: Strategy, Support system, and Self-preservation. Dr. Borde-Perry is presently a second-year Resident in Emergency Medicine at Einstein Medical Center in Philadelphia. Other JAASS activities planned for the fall included participating in AIDSWALKPhiladelphia to help raise funds for HIV prevention and care, and Philadelphia Cares Day, joining thousands of other volunteers in the School District of Philadelphia to help create libraries, paint classrooms, network computer labs, plant greenery and much more. For more information on how to get involved, email Bube.Bastin@jefferson.edu or Kristina.Fish@jefferson.edu

Jefferson Screens 350 for Prostate Cancer

Nearly 300 residents and employees received free screening during the Annual Prostate Cancer Awareness Screening Day at the Bodine Center. For the first time, an additional 30 participants were screened at Methodist Hospital. Held at Jefferson since 1989, the program has provided free screenings for almost 7,000 men. Jointly sponsored by the Kimmel Cancer Center at Jefferson and Jefferson Hospital, the event was coordinated by Christine Hubert, Clinical Research Coordinator, Department of Urology.

In the photo, Richard K. Valicenti, MD, Associate Professor and Clinical Director, Radiation Oncology, at left, and Irvin H. Hirsch, MD, Clinical Professor of Urology, consult with Leslie Peay, one of the nearly 300 participants at the Bodine Center.

The most common type of cancer diagnosed in American men, prostate cancer claims the lives of twice as many African-American men than Caucasian, underscore why screening of African-American men should begin at age 45.
Honoring 929 Jefferson Employees Celebrating Milestone Anniversaries!

A total of 929 employees were honored for celebrating milestone anniversaries in 5-year increments of service from 5 to 45 years. Nearly 700 honorees and their supervisors filled The Ballroom at the Benjamin Franklin House for the gala celebration. Pictured are employees recognized for 25, 30, 35, 40 and 45 years of service. Joining each group of honorees are Robert L. Barchi, MD, PhD, University President, and Thomas J. Lewis, Hospital President and CEO.

Student Group Improves Services, Looks Beyond Campus

Last spring, when Jefferson's Committee of Student Advisors asked local homeless shelters what donations they needed, it was as much who the donations were needed for (young people, ages 9 to 18) as what the shelters requested (books) that captured the students' attention. Dubbing the effort the "Care for Illiteracy," medical students on the committee took time away from their studies, collected 2,800 books, and delivered them to the shelters.

"Even in the midst of their regular work, the students placed a lot of energy into this project, communicating with community members, rounding up the donated books, and then personally taking them to the local shelters," says Conchita Rivera, University Associate Director of Student Financial Aid, who assists the committee. The books, both new and used, for youngsters and teens, came from drop-offs set up by the students for employees, as well as from local schools.

With this kind of focus and spirit, it's no wonder that the committee is also valued at the university for its primary role of providing feedback, communication, and suggestions to and from students about a variety of administrative and student-life matters. Organized in 1998, the committee includes student representatives from all three colleges, who serve an ombudsman-like role, bringing concerns and ideas to administrators in the areas of loans, information technology, registrar matters, and student services.

"Our student constituency provides us with some of our best advice," says the university's Registrar, Raelynn Cooter, PhD, Senior Associate Dean, Jefferson College of Health Professions. "The Committee of Student Advisors gives us a ready-made focus group."

Assisting peers and serving as a go-between for students and administrators, members relay issues that come up in the student body, helping the university to understand what's working and to create or modify programs as needed. But the committee's mission and interests go well beyond the campus, to include special community-based efforts, as demonstrated by its recent book drive.

Customized Gene Chip Rapidly Detects Genetic Changes in Children's Cancer

Genetics researchers have developed a customized gene chip to rapidly scan tumor samples for specific DNA changes that offer clues to prognosis in cases of neuroblastoma, a common form of children's cancer. The investigators, from The Children's Hospital of Philadelphia and Jefferson, say their technique may be readily adapted for other types of cancer.

"We have customized this tool for neuroblastoma, but the approach might also be adapted to other types of cancer in which DNA changes are important," says co-author Paolo Fortina, MD, PhD, Professor of Medicine, Jefferson Medical College (JMC), and Director, Genomics and Diagnostics, in the Department of Medicine's Center for Translational Medicine.

The proof-of-principle study appeared in a recent issue of Genome Research. Co-authors with Dr. Fortina are John M. Maris, MD, a pediatric oncologist at The Children's Hospital of Philadelphia, and Saul Srey, PhD, Professor of Medicine and Associate Director of Research at the Cardenza Foundation for Hematologic Research and the Division of Hematology at JMC. Additional co-authors are George Hii, Peter S. White, PhD, and Eric Rappaport, PhD, of The Children's Hospital of Philadelphia; and Craig A. Gelfand, PhD, and Shobha Varde, MS, of Orchid Biosciences, Princeton, NJ. Grants from the National Institutes of Health and the Children's Oncology Group supported the work.

News from the Center for Applied Research on Aging and Health (CARAH) Cops a Successful 2005

A $2.2 million NIH grant, an impressive showing at a national conference, and four published books culminated another successful year for the Center for Applied Research on Aging and Health (CARAH), Jefferson College of Health Professions.

• The National Institute of Mental Health in the National Institutes of Health awarded a five-year, $2.2 million grant to CARAH and Center in the Park, a nationally accredited community senior center in Germantown. The collaborative partnership will explore perspectives on life and well-being among a population of African American elders.

• Topics such as quality of life, physical frailty, suffering and caregivers were the subject of 11 CARAH presentations at the Gerontological Society of America's 58th Annual Scientific Meeting held in Orlando. This strong presence at the national meeting enforces Jefferson’s reputation as a leader in research about aging.

• A December 8 reception at Jefferson's Faculty Club will celebrate the four books published by CARAH researchers in 2005. The books include three which were written or co-written by Lauren N. Gillin, PhD, CARAH Director, and one written by Helen Black, PhD, a research associate at CARAH. All titles are available at the Jefferson Bookstore.

For more news about CARAH, visit www.jefferson.edu/jchp/carah.

Jefferson Radiology Participates in Clinical Trial Showing Benefits of Digital Mammography (continued from page 1)

Digital mammography takes an electronic image of the breast and stores it directly in a computer, allowing the recorded data to be enhanced, magnified, or manipulated for further evaluation. The electronic image also can be printed on film.

By comparison, conventional film mammography units use film to both capture and display the image. The sensitivity of film mammography is somewhat limited in women with dense breasts, a population at higher risk for breast cancer.

Digital screening mammography reduces breast cancer mortality, and since digital mammography detects more cancers than film mammography in a select group of patients, it is likely to lead to a greater reduction of deaths than would be possible with film mammography.

Breast cancer is the second leading cause of cancer-related death in women in the United States, and the lifetime risk for developing breast cancer is 1 in 7. An estimated 211,240 women will be diagnosed with breast cancer in the United States this year, making it the most commonly diagnosed cancer in women. An estimated 40,410 women will die this year in the United States.

Dr. Rao says "Jefferson’s new Breast Care Center will house a fully digital state-of-the-art mammography facility, providing the highest quality care to Jefferson patients. Only 8 percent of breast imaging units are digital nationwide."

Over the past five years, the Department of Radiology has participated in seven ACRIN trials, including DMIST. The Jefferson community will be pleased to note that ACRIN has awarded Jefferson Department of Radiology the "ACRIN Network Chairs Institutional Achievement Award" in recognition of the department’s achievement and exceptional performance in conducting clinical trials. The award was presented at the 2005 Annual ACRIN Fall Meeting in Pentagon City, VA.

Congratulations to 2005 Big Walk Team Captains!

Congratulations go to four 2005 Big Walk Team Captains for their successful efforts in helping to raise life-saving funds for Jefferson University Hospital’s Neonatal Intensive Care Unit (NICU), Transitional Nursery and Labor and Delivery units.

Raising Most Revenue:
1. Dwight Lewis, Director of Information Systems
2. Andrea Weinstein, Risk Management Educator, Legal Risk Management

Recruiting Most Walkers:
1. Christine Muldoon, RN, BSN, Nurse Coordinator, Nursing
2. Steven Trachtenberg, Associate Clinical Engineer and Purchasing Coordinator, Biomedical Instrumentation

Aiding Katrina Survivors

When staff at the Center for Applied Research on Aging and Health (CARAH), Jefferson College of Health Professions, had unused adaptive equipment from their clinical studies, they immediately knew that survivors from Hurricane Katrina could benefit.

Knowing that The College of Physicians of Philadelphia is one of several regional drop-off points for such donations, Nancy L. Chernet, MA, MPH, Program Manager, CARAH, gathered the material together and coordinated delivery. The donated equipment had been initially purchased for subjects in several of CARAH’s NIH-funded studies (PROJECTS ABE & REACH).

The local Katrina effort is being coordinated through the Institute on Disabilities at Temple University and sent to the Gulf Coast via the Louisiana Assistive Technology Access Network.
