Instructions for OSX (10.7) Lion

1) Go to the Apple Menu, and select System Preferences
2) Click the Network system preference icon in the third row

3) Click Wi-Fi on the left, and click Advanced... at the bottom right
4) Click the + Button.

5) Enter in the following information in the new window (some fields may already be filled):

* Network Name: wireless100
* Security: WPA2 Enterprise
* User Name: your campus key
* Password: Your password
* Click OK
6) Click OK on the next window. 
7) Click the Apply button at the bottom. 
The system should log in for you. 
If you do not connect right away, click the “turn airport off” and then click again to turn it back on. 
If you have not logged in before or if the Certificate has been updated you will be presented with this window after you have connected to the wireless network.

There are two Certificate servers so you will have to do this twice, once for each server once a year. The names of the servers are “radius5” and “radius6”.

8) Click the continue button and you will be allowed on the network.

9) Open your safari web browser and connect to any non-Jefferson website (Yahoo.com, Google.com and any other site). Your web browser will be redirected to the Student Asset Registration Page. Here you will register your device on the network. Click the Accept button.
10) Add your campus key, password and select register.

11) You should then see the “Registration is now complete” page.

12) Go back to the Network System preference and select the Wi-Fi option on the Left column. Turn off the Wi-Fi with the button in the top right hand column. Leave it off for 2-3 mins. Then turn the Wi-Fi back on and you should be connected back to the student wireless network with a valid IP address.

Just remember that twice a year all student devices are removed from the Student Asset Registration Database. On or after Dec 31st and June 30th you will need to register all your personal devices on the Jefferson Student wireless network.
