Wireless Configuration Instructions: Windows Vista / 7

WIRELESS NETWORK CONFIGURATION

1. Click on your Windows orb (Start menu.)
2. Click on “Control Panel”.
3. Click “View network status and tasks” under “Network and Internet”.

4. Click on “Setup a connection or network” from the left hand side of the Network and Sharing Center.
5. Click “Manually connect to a wireless network” from the Choose a connection option dialog box.

6. Click on the Next button.

7. Enter the following information in the Manually connect to a wireless network dialog box:
   a) Network name: wireless100
   b) Security type: WPA2-Enterprise
   c) Encryption type: AES

8. Click on the Next button
9. In the **Successfully added wireless100** dialog box, click on “Change connection settings”:

![Successfully added wireless100 dialog box](image1)

10. In the **wireless100 Wireless Network properties** dialog box, click the **Security** tab then click on the **Settings...** button.

14. Click on the OK button.
15. Complete adding the wireless network configuration by the following:

a) Click on the OK button in the Protected EAP Properties dialog box.
b) Click on the OK button in the wireless100 Wireless Network properties dialog box.
c) Click on the Close button in the Manually connect to a wireless network dialog box.
d) Click on the Close button in the Network and Sharing Center window.

16. When your computer is in range of the wireless100 wireless network you will get a popup at the bottom of your screen requesting additional information. Click this popup dialog.

17. You will be prompted to enter your credentials for the wireless100 network. In the Enter Credentials dialog box, enter your campus key in the User name field and your password in the Password: field. Leave the Logon domain: field empty. Click on the OK button.
18. You will be challenged to accept the server certificate. The server certificate will list the server name of RELIANT. Accept this certificate by clicking on the OK button in the Validate Server Certificate dialog box.

19. In the Connect to a network dialog box, ensure that there are check marks in the Save this network and Start this connection automatically check boxes. If not, click in them to insert check marks.

20. Click on the Close button.

21. Your computer will then authenticate to the wireless100 network and you will have access to all network and Internet resources. Your logon information will be saved automatically. You will not have to enter this information again until your password changes or expires.
