Purpose

This two-year Outcomes Research Fellowship will provide Fellows with the opportunity to conceptualize, implement, evaluate and disseminate the results of device-related outcomes research. The Fellow’s research will be focused on understanding global evidence requirements and helping to develop critical evidence generation strategies and tactics to support the value of select medical device interventions. The Fellow will also develop the research skills required to evaluate the quality, safety and cost of such devices in the United States and other key regional markets. Alumni of the program will be well prepared for positions with medical device and pharmaceutical companies, healthcare systems, and public and private insurance organizations.
The two-year TEVA Global Health Economics and Outcomes Research (GHEOR) Fellowship program is administered in conjunction with Thomas Jefferson University. The Fellowship provides the fellow with training and exposure to various aspects of health economics and outcomes research in both the academic and industry settings. The program is designed to facilitate and enable the fellow in training and succeeding in the challenging global healthcare market.

Program Description

- Research design for studies measuring economic, clinical and humanistic outcomes.
- Health economics and outcomes research principles, and the development and adoption of new medical devices, including application of these principles to research supporting the development of new drugs.
- Understanding of the health care sector and practices.
