Post-Doctoral Research Fellow

Radiation Oncology

Lab of Dr. Erik Blomain

Website: https://research.jefferson.edu/labs/researcher/blomain-research.html

The Blomain Laboratory is seeking a postdoctoral fellow to conduct original laboratory research as part of our research program studying cancer biology and therapy with a special focus on radiotherapy. The ideal candidate would have extensive laboratory bench experience (with associated impactful publications) in the fields of cell biology, cell signaling, and molecular biology in relevant preclinical models (in vitro, in vivo, and ex vivo) of cancer biology. Additional experience in bioinformatics and computational biology preferred but not required. Dr. Blomain himself is a physician scientist in the department of Radiation Oncology with over a decade of experience in translational cancer research, clinical medicine, and mentorship. Applicant would be joining a fully equipped laboratory that is actively involved in training graduate students and is supported by a full-time staff computational biologist. The Blomain lab is part of a larger collaborative work environment with multiple co-investigators (see "Collaborators" link on lab website) which allows for collaboration with a diverse set of scientific backgrounds and expertise as well as ample opportunities for mentorship and career development.

To Apply:

- 1. Search: https://hr.jefferson.edu/careers.html
- 2. Select 'Search Jobs' (yellow box)
- 3. Enter in the search bar Job ID: 9295544
- 4. Select 'Apply for Job'
