The Department of Radiation Oncology offers a dynamic and comprehensive residency program. As a hospital-based service with a major academic role within the medical college, our department considers resident training its most important academic function.

Resident physicians complete our training program as highly capable medical professionals, prepared for their American Board of Radiology (Radiation Oncology) certification examinations and are more than ready to competently practice radiation oncology without supervision. They achieve this status under the guidance of staff radiation oncologists and medical physicists.

Every day attending physicians and residents engage in one-to-one teaching and learning through carefully structured academics and hands-on experience with a high volume of patients from a population experiencing a broad range of cancers.

Our department's radiation program for cancer is one of the largest in the Delaware Valley, treating approximately 100 patients daily at Thomas Jefferson University Hospital facilities and approximately 60 patients at each of our affiliated facilities: Jefferson Torresdale Hospital, Asplundh Cancer Pavilion, and Sidney Kimmel Cancer Center — Washington Township, totaling about 70,000 radiation therapy treatments annually.

The multi-disciplinary programs coordinated through Jefferson's Sidney Kimmel Cancer Center, and predominantly housed at the Bodine Center for Cancer Treatment, continue to expand. Currently, we run multidisciplinary clinics in genitourinary, thoracic, sarcomas, liver tumors, as well as central nervous system tumors. In addition, several multidisciplinary conferences take place each week.

To further expand the exposure of our residents, the department has in place rotations in pediatric radiation oncology rotation at St. Jude Children's Research Hospital in Memphis, Tennessee, and a Cyberknife/LDR prostate brachytherapy rotation at Christiana Care in Newark, Delaware. The residents who have completed these rotations have had outstanding clinical experiences.

Today, technological upgrades are significantly changing our treatment planning and delivery. Jefferson staff and residents selectively analyze the relative benefits of these new tools so that we can advise our colleagues and community.

Our department is also rich in research experience and activity. Residents interested in research are sure to gain involvement in clinical, translational, or basic science research projects. Together with the faculty, our residents have a long tradition of presentations at national meetings and peer-reviewed publications. Learning also comes from experienced oncology nurses, technical staff, and scientists in our department and throughout the university.
