Functional Independence Measure (FIM™)Change

FIM™ quantifies a person's level of independence. A higher score indicates a greater level of independence. FIM™ change represents how much functional gain a patient achieves between admission and discharge.

Patients Living in the Community 80-180 days after discharge

Patient Experience

“My experience at Jefferson was excellent in all aspects and at each stage of my care. I will highly recommend Jefferson to anyone needing rehab. All of the staff were very professional, cheerful, and efficient.”

“If I ever need rehab again, I would like it to be at Jeff.”

“I received exceptional care from all staff & my fears were put to rest by the staff’s compassionate care they provided.”
